STILL PIONEERING

REPORT TO AIRPORT AUTHORITY

SRAA-16-59

Date of Meeting: October 20, 2016

Subject: Consideration of future terminal apron expansion and reconstruction

Purpose of Report: Provide overview of existing and future ramp reconstruction and expansion

Background Discussion: In concert with current growth and increased usage of the airport by large aircraft and the scheduled airline service, we have been evaluating what's next in the overall plan to accommodate the current and future needs.

The ongoing concerns with current terminal and ramp space include:

- Limited weight load carrying capabilities
- Limited area to park heavy aircraft numbers thereby limiting use of the airport during peak times
- Service life of existing paving
- Limits of taxiway entry points by large aircraft (Taxiway Radius)
- Budget limitations to consider moving this project forward

With these concerns in mind, Airport staff and others have developed some elementary phases for possible expansion and reconstruction of the existing apron. This phasing is a discussion tool to begin looking at phased construction in concert with our overall capital plan. Today I want to provide a brief overview of the possible phasing of the project.

Currently, the airport is programmed for the completion of the parallel taxiway system during the FY 2016-2017. The Geo-Tech testing and survey work would be performed for the Runway 4-22 in FY 2016-2017 (funded by state system plan), and the reconstruction of the Runway 4-22 project in FY 2017-2018.

Recommendation: This item has been presented for discussion purposes only. Airport staff requests no action to be taken at this time.
